

**05/15/09 - Quality internet hosting packages tailored to your requirements**

I provide a fully managed internet hosting service on Linux or Windows servers..

Your domain will be hosted in a state of the art facility in the UK. This means Google recognises your site as being British so you get more relevant traffic to your site.

I will set-up and maintain your domain, website and email, and help you set up your computer(s) so you can send and receive email from your domain.

Unlimited email and webspace is included. A wide range of other options are available such as:

- Microsoft Exchange email accounts
- Anti-spam filters
- MySQL and MS-SQL databases
- Traffic statistics so you can examine the traffic and visits your website is getting using a wide range of reports in an easy to use interface.
- and much much more...

Already have your own domain? We will organise the transfer for you.
